U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION Page 2 of 17

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (Currently Amended) An apparatus for electronically processing a <u>plurality of accounts</u> receivable checks cheek received by a merchant, the <u>apparatus</u> comprising:
- a scanning component that converts <u>each of the plurality of checks into respective</u> the eheek into an electronic data;
- a user interface component that allows the merchant to input a <u>command to enter a</u> <u>default check amount mode and a</u> check amount associated with the <u>plurality of checks</u> check; and
- a processor that executes in the default check amount mode when the command is received allows the merchant to set via the user interface component, and that sets the check amount received via the user interface component to a default check amount, wherein the default check amount mode allows thereby allowing the merchant to process in a default check amount mode at the plurality of accounts receivable checks received by the merchant in a non-face-to-face manner and having the same check amount without having to enter the check amount for each of the plurality of accounts receivable checks, and wherein the plurality of accounts receivable checks are received by the merchant in a non-face-to-face manner, eheeks.
- (Currently Amended) The apparatus of claim 1, wherein the scanning component is
 adapted to read a the check's magnetic ink character recognition line for each of the plurality of
 checks and to obtain an image of at least a portion of each of the plurality of checks. eheek-
- (Original) The apparatus of claim 1, wherein the processor is further configured to allow the merchant to disable the default check amount mode by inputting a specific value for the default check amount.

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION Page 3 of 17

 (Original) The apparatus of claim 3, wherein the specific value of zero disables the default check amount mode.

- 5. (Currently Amended) The apparatus of claim 1, further comprising a communication component adapted to communicate with a check processing service that performs <u>a respective</u> an authorization process for <u>each of</u> the <u>plurality of checks</u> eheek based on information associated with the converted <u>plurality of checks</u> eheek wherein the authorization process includes a risk assessment of each of the plurality of checks. the eheek-
- 6. (Currently Amended) The apparatus of claim 5, wherein the check processing service performs each the authorization process and notifies the merchant of its decision in a manner that depends at least on a level of service subscribed by the merchant wherein the level of service includes the check processing service guaranteeing or purchasing check transactions it authorizes thereby assuming at least some of the risk associated with the check.
- 7. (Currently Amended) A method for processing a plurality of accounts receivable checks having a same check amount via a location-base device associated with a merchant, the method comprising:

providing via the location-base device an option for the merchant to operate the locationbase device in a default check amount mode:

obtaining via the location-base device an input command from the merchant to operate the location-base device in a default check amount mode;

providing via the location-base device an option for the merchant to set a default check amount:

obtaining via the location-base device an input value from the merchant; and if the merchant chooses the option for setting the default check amount; and U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION

Page 4 of 17

setting the input value as the default check amount such that the plurality of a subsequent accounts receivable checks eheck received by the merchant in a non-face to face manner will be processed with the default check amount in a the default check amount mode until the default

check amount is changed by the merchant, merchant.

wherein the plurality of accounts receivable checks are received by the merchant in a

non-face-to-face manner.

(Currently Amended) The method of claim 7, further comprising scanning the <u>plurality</u>
of checks eheek to read the each check's magnetic ink character recognition line and to obtain an

image of at least a portion of the each check.

9. (Original) The method of claim 7, wherein setting the input value to a specific value

disables the default check amount mode.

10. (Original) The method of claim 9, wherein the specific value of zero disables the default

check amount mode.

11. (Currently Amended) The method of claim 7, further comprising communicating with a

check processing service that performs an <u>a respective</u> authorization process for <u>each of</u> the

plurality of checks eheck based on information associated with the each check wherein the

authorization process includes a risk assessment of the each check.

12. (Currently Amended) The method of claim 11, wherein the check processing service

performs the each authorization process and notifies the merchant of its decision in a manner that depends at least on a level of service subscribed by the merchant wherein the level of service

includes the check processing service guaranteeing or purchasing check transactions it authorizes

thereby assuming at least some of the risk associated with the check.

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE

TO FINAL OFFICE ACTION

13. (Previously Withdrawn) An apparatus for electronically processing a financial

transaction involving by a merchant, comprising: a user interface component that allows the merchant to input a transaction parameter associated with the financial transaction; and a

processor that allows the merchant to set via the user interface component a default transaction

parameter thereby allowing the merchant to process in a default parameter mode a plurality of non-face-to-face transactions having the same transaction parameter without having to enter the

transaction parameter for each of the plurality of non-face-to-face transactions.

14. (Previously Withdrawn) The apparatus of claim 13, wherein the financial transaction

comprises a check transaction.

15. (Previously Withdrawn) The apparatus of claim 14, further comprising a scanning

component configured to convert a check associated with the check transaction into an electronic

data thereby allowing at least a portion of subsequent processing of the check transaction to be

performed electronically.

16. (Previously Withdrawn) The apparatus of claim 15, wherein the scanning component is

adapted to read the check's magnetic ink character recognition line and to obtain an image of at

least a portion of the check.

17. (Previously Withdrawn) The apparatus of claim 13, wherein the transaction parameter

comprises a billing control number associated with the merchant such that the default transaction

parameter comprises a default billing control number.

18. (Previously Withdrawn) The apparatus of claim 13, wherein the transaction parameter

comprises a transaction amount such that the default transaction parameter comprises a default

transaction amount.

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION

Page 6 of 17

19. (Previously Withdrawn) The apparatus of claim 18, wherein the processor is further

configured to allow the merchant to disable the default amount mode by inputting a specific

value for the default transaction amount.

20. (Previously Withdrawn) The apparatus of claim 19, wherein the specific value of zero

disables the default amount mode.

21. (Previously Withdrawn) The apparatus of claim 13, further comprising a communication

component adapted to communicate with a financial transaction processing service that performs an authorization process for the financial transaction based on information associated with the

financial transaction wherein the authorization process includes a risk assessment of the financial

transaction.

22. (Previously Withdrawn) The apparatus of claim 21, wherein the financial transaction

processing service performs the authorization process and notifies the merchant of its decision in

a manner that depends at least on a level of service subscribed by the merchant wherein the level of service includes the processing service guaranteeing or purchasing transactions it authorizes

thereby assuming at least some of the risk associated with the financial transaction.

23. (Previously Withdrawn) A method for processing a plurality of non-face-to-face

financial transactions having a same transaction parameter, the method comprising: providing an

option for a user to set a default transaction parameter; obtaining an input value from the user if the user chooses the option for setting the default transaction parameter; and setting the input

value as the default transaction parameter such that a subsequent financial transaction will be

processed with the default transaction parameter in a default parameter mode until the default

transaction parameter is changed by the user.

24. (Previously Withdrawn) The method of claim 23, wherein the financial transaction

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION

Page 7 of 17

comprises a check transaction.

25. (Previously Withdrawn) The method of claim 24, wherein obtaining the input value is

achieved via a point-of-sale device.

26. (Previously Withdrawn) The method of claim 25, further comprising scanning the check

to read the check's magnetic ink character recognition line and to obtain an image of at least a

portion of the check.

27. (Previously Withdrawn) The method of claim 23, wherein the transaction parameter

comprises a billing control number associated with a merchant such that the default transaction

parameter comprises a default billing control number.

28. (Previously Withdrawn) The method of claim 23, wherein the transaction parameter

comprises a transaction amount such that the default transaction parameter comprises a default

transaction amount.

29. (Previously Withdrawn) The method of claim 28, wherein setting the input value to a

specific value disables the default amount mode.

30. (Previously Withdrawn) The method of claim 29, wherein the specific value of zero

disables the default amount mode.

31. (Previously Withdrawn) The method of claim 23, further comprising communicating

with a financial transaction processing service that performs an authorization process for the

transaction based on information associated with the transaction wherein the authorization

process includes a risk assessment of the financial transaction.

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE

TO FINAL OFFICE ACTION

Page 8 of 17

32. (Previously Withdrawn) An apparatus for processing a financial transaction, comprising:

a first means for determining a default transaction parameter; and a second means for processing

a plurality of subsequent financial transactions using the default transaction parameter.

33. (Previously Withdrawn) The apparatus of claim 32, wherein processing the financial

transaction comprises converting a check transaction via a point-of-sale device.

34. (Previously Withdrawn) The apparatus of claim 33, wherein converting the check

comprises scanning the check to read the check's magnetic ink character recognition line and to

obtain an image of at least a portion of the check.

35. (Previously Withdrawn) The apparatus of claim 34, wherein the first means includes a

capability for obtaining an input value for a transaction parameter via the point-of-sale device

from a user using the point-of-sales device.

36. (Previously Withdrawn) The apparatus of claim 35, wherein the transaction parameter

comprises a billing control number associated with a merchant such that the default transaction

parameter comprises a default billing control number.

37. (Previously Withdrawn) The apparatus of claim 35, wherein the transaction parameter

comprises a transaction amount such that the default transaction parameter comprises a default

transaction amount.

38. (Previously Withdrawn) The apparatus of claim 37, wherein the first means further

includes a capability to disable a default parameter mode by setting the input value to a specific

value.

39. (Previously Withdrawn) The apparatus of claim 38, wherein the specific value of zero

U.S.S.N. 10/695,413 Filed: October 27, 2003 AMENDMENT & RESPONSE TO FINAL OFFICE ACTION Page 9 of 17

disables the default parameter mode associated with the default transaction amount.

40. (Previously Withdrawn) The apparatus of claim 32, wherein the second means further comprises communicating with a financial transaction processing service that performs an authorization process for the transaction based on information associated with the transaction wherein the authorization process includes a risk assessment of the financial transaction.
